### SOIL&NAIL (SN) ANCHORS

People call rock bolt as SN-Bolt, SN Rock Bolt, SN Anchor, which is used for mining, tunneling and specialized civil engineering. The whole set of SN bolt consists of a thread bar, plate and a nut.

There are three major ways of anchoring the rock bolts: mechanical, grouted, and friction. The most common grout-anchored rock bolt is the fully grouted rebar, a threaded bar made of steel in quality B500B.

Diorit produces threaded SN anchors from fi 16mm to 32mm.

The field of application of the rock and soil anchor system includes the following areas:

- Slope protection,
- Embankment protection,
- Protection of construction pits,
- Slope protection,
- Securing the tunnel and creating an open tunnel front.

Diorit LTD. for its production of SN anchors has the most important certificates:

- Certificate of Conformity(CoC) and
- Declaratin of Performance (DoP)

We are accredited for the EU and the world through ZAG, i.e. the leading institute in the field of construction in Slovenia.

Standard thread length: 120 [mm], standard thread length 200 [mm] – on request.

In our production, with the help of our partners, we are also able to offer permanent SN anchors, which use can be up to 100 years.
